Mean (среднее арифметическое)

Definition

Let C be mean of a and b. Then:

$$C = \frac{a+b}{2}$$

Let D be mean of a, b and c. Then:

$$D = \frac{a+b+c}{3}$$

Example:

Mean of 2 and 3 will be $\dfrac{2+3}{2} = 2,5$

Mean of 10, -6 and 8 will be $\dfrac{10 + (-6) + 8}{3} = 4$
